SEMESTER I DETAILED SYLLABUS

VESPSMB101

(MOLECULAR GENETICS - I)

Learning Objectives

- To achieve the understanding of fundamental genetic processes for all organisms, especially with in vivo and in vitro genetic tools.
- To provide insights to transfer of genes, genetic exchange and DNA repair.
- To understand the regulation of gene expression in prokaryotes.

Learning Outcome:

- At the end of the course students will
- Be able to understand the molecular mechanism of DNA transfer, and Homologous recombination in *E.coli* and in eukaryotes that will enable the students to have a complete view of genetic transfer and exchange mechanisms.
- Be able to reason out the correlation between Oncogenes, Cellular Proto-Oncogenes, and Tumor Suppressor Genes and thus realizes their role in the development of Cancer
- Be able to understand at molecular levels the different types of operons in *E.coli* as well as in *Bacillus subtilis* besides knowing about Riboswitch regulation.
- Be able to enhance their knowledge about Regulation of Nitrogen assimilation, Heat Shock response, Stress response and sulphur regulation and genetic analysis of sporulation.

Course Code	Unit	Sub unit	Title	No of lectures	Credits
VESPSMB 101			Molecular Genetics - I	60 L	04
	1		G <mark>en</mark> etic Exchange among bacteria and Molecular basis of Homologous Recombination	15 L	01
		1.1	Conjugation : 1.1.1 Overview, Classification of self-transmissible plasmids 1.1.2 Mechanism of DNA transfer during Conjugation in Gram negative bacteria- 1.1.3 Chromosome transfer by plasmids- Formation of Hfr strains, transfer & mobilization of chromosomal DNA by integrated plasmids, prime factors 1.1.4 Transfer system of gram positive bacteria-Plasmid pheromones	05	

	1.2	Transformation	05	
	1.2		05	
		1.2.1 Development of Competence in		
		Gram-positive bacteria and Gram-negative bacteria, competence based on type IV		
		secretion systems.		
		1.2.2 Regulation of competence in <i>Bacillus subtilis</i> - Competence pheromones.		
		1.2.3 Role of natural transformation-		
		Nutrition, repair, recombination, Importance of		
		natural transformation for forward and reverse		
		genetics.		
		1.2.4 Artificially induced competence-		
		Calcium ion induction, transformation by		
		plasmids, transfection by phage DNA,		
		transformation of cells with		
		chromosomal genes, Electroporation.		
	1.3	Homologous recombination at molecular level	05	
	1.5		05	
		1.3.1 Models for Homologous recombination		
		1.3.2 Homologous recombination		
		pr <mark>ote</mark> in machines		
		1.3.3 Homologous recombination in <i>E.coli</i>		
		(RecBCD pathway)		
		1 .3.4 Homologous recombination in		
		eu <mark>ka</mark> ryotes- Mating type switching		
		1.3.5 Site Specific recombination		
2		T <mark>ran</mark> spos <mark>able elements, DNA re</mark> pair and	15 L	01
		G <mark>en</mark> etics of Cancer		
	2.1	2.1.1 Transposable genetic elements	07 L	
		in <mark>eu</mark> karyotes :		
		T <mark>ran</mark> sposable Ac and Ds Elements in Mai <mark>ze,</mark> P		
		Elements and Hybrid Dysgenesis in		
		D <mark>roso</mark> phila.		
		2.1.2 Retrovirus and Retrotransposons:		
		Retrovirus, Retrovirus like elements,		
		Retroposons		
		2.1.3 Transposable elements in Humans		
		2.1.4 The Genetic and Evolutionary		
		Significance of Transposable Elements:		
		Transposons as mutagens, Genetic		
		transformation with transposons, Transposons		
		and Genome organization, Evolutionary Issues		
		Concerning Transposable Elements		

2.2	DNA repair	02L	
	2.2.1 Eukaryotic Nucleotide Excision repair,		
	2.2.2 Mismatch repair mechanism in humans,		
	2.2.3 Non-homologous end joining (NHEJ)		
	pathway for repairing double stranded		
	breaks		

	2.3	Genetic Basis Of Cancer	06L	
	2.3	2.3.1 Cancer: A Genetic Disease, Forms of Cancer, Cancer and the Cell Cycle 2.3.2 Oncogenes: Tumor-Inducing Retroviruses and Viral Oncogenes, Cellular Proto- Oncogenes, protein products of proto- oncogenes, Changing cellular proto- oncogenes into oncogenes, Chromosome Rearrangement and Cancer. 2.3.3 Tumor Suppressor Genes: the Retinoblastoma tumor suppressor gene- RB, P53, Breast cancer tumor suppressor genes, MicroRNAs genes, Mutator genes, Telomere shortening genes 2.3.4. The multistep nature of cancer	UUL	
3		R <mark>eg</mark> ulation of gene expression in prokaryotes	15L	01
	3.1	OperonSystems(DetailedMolecularstructure of repressor and operator sites)3.1.1The E. coli Lac operon3.1.2The E. coli Gal operon,3.1.3The E. coli ara operon,3.1.4The E. coli Maltose operon,3.1.5Trp operon of Bacillus subtilis,3.1.6Riboswitch regulation	15	
4		Global regulation in bacteria	15 L	01
	4.1	Global regulation systems 4.1.1 Regulation of Nitrogen assimilation: 4.1.2 Pathways for nitrogen assimilation, regulation of nitrogen assimilation by the Ntr	01 03	
		system. <i>4.1.3</i> Stress response In Bacteria: Heat shock regulation in <i>E coli</i> <i>4.1.5</i> Iron regulation in <i>E coli</i> .	03 02 06	
		<i>4.1.6</i> Regulation of Sporulation in <i>Bacillus subtilis</i>		

Self-study : Solve at least five problems on	
gene transfer and regulation given at the end	
of the chapter in Lehninger/Schaum	
Series/Russell etc.	

PRACTICALS BASED ON VESPSMB101

- 1. Demonstration of Conjugation in *E. coli*
- 2. Preparation of competent *E. coli* cells,
- 3. Isolation of plasmid DNA from minicultures and maxi cultures.
- 4. Transformation of competent cells using plasmid DNA
- 5. Endospore formation in *Bacillus subtilis*: Requirements for germination and outgrowth of spores, correlation between sporulation and protease activity.
- 6. Response of nutrient stress on the growth and size of Pseudomonas spps
- 7. Problems on gene transfer mechanisms, and regulation.
- 8. Cancer genetics- visit to ACTREC, TIFR, BARC etc

VESPSMB102 (ENVIRONMENTAL MICROBIOLOGY AND SUSTAINABILITY)

Learning Objectives

To introduce to the various theories of evolution

To enhance Knowledge about microbial world in space

To understand microbial biodiversity in different habitats

To know the adaptations of microorganisms to extreme environmental conditions and their applications

To understand waste management, biohazard and biosafety standards.

To inculcate sense of scientific responsibilities and social and environment awareness

Learning Outcomes

At the end of the course students will:

Be able to understand how life has evolved on earth and in space

Be able to elaborate the characteristics of different groups of microorganisms found in different habitats

Be able to discuss microorganisms in extreme environments and their adaptations Be able to reflect their role as global citizens, consumers and environment protectors.

Course	Unit	Sub	Title	No of	Credits
Code		unit	Environmental Misuchiele and	lectures	04
VESPSM B 102			Environmental Microbiology and Sustainability	60L	04
	1		Theories of evolution and astrobiology	15 L	01
		1.1	H <mark>isto</mark> ry of evolution	01	
		1.2	Theories of organic evolution -Lamarckism - Darwinism -Modern synthetic theory -Germplasm theory -Mutation theory	04	
		1.3	Introduction to molecular evolution	01	
		1.4	 Neutral theory of evolution Polymorphism Divergence Near neutral theory of evolution 	03	
		1.5	Mechanisms of Molecular Evolution and the Modern Molecular Clock	02	

	1.6	 Astrobiology Introduction The space environment Microbiological studies in the space environment Microbial transfer through space 	04	
2		Microbial Diversity	15L	01
	2.1	The expanse of microbial diversity	01	
	2.2	Estimates of total number of species, measures and indices of diversity, the species concept for prokaryotes and eukaryotes	03	
	2.3	Culture-dependent microbiology	03	
	2.4	Newer approaches for exploring uncultivable bacteria: Culture independent molecular methods	04	
	2.5	Methods of extracting total bacterial DNA from a habitat; the metagenomics approach	02	
	2.6	B <mark>iop</mark> rospecting	04	
		Pharmacologically active agents		
		of microbial origin		
		• Industrial enzymes		
		 Novel antifoulants and antibiofilm 		
		agents from microbes		
3		Extremophiles	15L	01
	3.1	 Physiology, Biochemistry and Applications of Thermophiles Psychrophiles Piezophiles Radiation resistant organisms 	07	
	3.2	 Physiology, Biochemistry and Applications of Acidophiles Alkaliphiles Halophiles 	05	
	3.3	Geo Microbiology – Bio corrosion and Bioleaching	03	
4		Environment & Natural Resource	15L	01
		Management & Safety Standards		
	4.1	 Natural resources: Renewable/ non-renewable resources of Land, water, forest, minerals, energy, food. Associated problems and management practices. 	02	

	- Environmental Impact Assessment and	
	Sustainable Development	
4.2	Solid waste management:	04
	 Classification of solid waste Effects of solid waste pollution, Key components of solid waste management. On site disposal options Offsite disposal options Biodegradable waste from kitchen, 	
	 abattoirs and agricultural fields and their recycling by aerobic composting or bio-methanation. Non-biodegradable waste like plastics, glass, metal scrap, e waste and building materials, and its recycling 	
4.3	 Hazardous waste management: Hazardous wastes: definition, levels of biohazards, Risk assessment and handling procedures. Xenobiotic compounds and its biodegradation Management of hazardous waste using biotechnological applications Examples: cyanide detoxification, petrochemical industry effluents, phenols, Hazardous waste from paint, pesticides and chemical industries Probable means to reduce these waste 	05
4.4	 through Common Effluent Biosafety: Need for biosafety levels, Biosafety guidelines for GMOs and LMOs. Role of Institutional biosafety committee. RCGM, GEAC, etc. for GMO applications in food and agriculture. Environmental release of GMOs. Overview of national regulations and relevant international agreements. Ecolabelling, ISO 14001, Generally Recognized as Safe (GRAS) 	04
	 Self study topics: 1. Methods of extracting total bacterial DNA from a habitat 2. Case study: EIA report of a polluted ecosystem 	

PRACTICALS BASED ON VESPSMB102

- 1. Enrichment and isolation of cellulose degraders from natural resources
- 2. Isolation and characterization of thermophiles and thermotolerant organisms from hot spring water samples.
- 3. Screening of Halophilic bacteria from salt pans and identification of an isolate by conventional biochemical as well as by VITEK systems
- 4. Extraction of membrane lipids of halophilic archaea and its detection by TLC
- 5. Determination of Bacteria, algae and fungi present in natural ecosystems samples and calculate their relative abundance and frequency of occurrence
- 6. Determine the microbial activities in the soil samples by estimating hydrolysis of FDA

Since 1962

VESPSMB103 (BIOCHEMISTRY)

Learning Objectives

To strengthen the fundamental concepts of Biochemistry and understand the broad domains of biochemistry.

To endeavour training of Post –graduate students to design and carry out various projects. To improve their practical biochemistry knowledge especially while preparing media for their experiments, to calculate various parameters of acid -base chemistry and reason out chemical reactions observed during experiments.

To improve their logical skills so as to efficiently find solutions to problems encountered during research activity.

Learning Outcomes:

Think independently and work in the laboratory Perform better in competitive exams Gaining employability in industry and take on research- oriented careers.

PRACTICALS BASED ON VESPSMB103

- 1. Preparation of buffers.
- 2. Extraction, isolation, partial purification (if necessary), calculation of percentage yield and performing a confirmatory test for the following:
 - a. lactose from milk
 - b. Albumins and globulins from egg white
- 3. Determination of pk values by titration curves
- 4. Interpretation of Ramchandran plot.
- 5. Degradation of aromatic compounds like napthalene
- 6. Cultivation of anaerobic bacteria using Gaspak method
- 7. Cultivation of anaerobes- *Closridium* species using litmus milk, observation of stormy fermentation of milk, use of Robertson's cooked meat medium and anaerobic chamber

VESPSMB104 (MEDICAL MICROBIOLOGY AND MICROBIAL PATHOGENESIS)

Learning Objectives:

Modern techniques have helped to elucidate mechanisms of pathogenicity expression and evasion of host defence which in turn have helped in a better understanding of disease mechanisms. Such studies have also thereby opened doors to newer methods of combating infections or preventing them. At the same time, microbes too are devising new mechanisms to overpower the antibiotics used as therapeutics, compelling us to understand and combat the threat of antibiotic resistance. The curriculum also wishes to touch upon the recent growing interest on the concept of Microbiome.

To introduce the students to molecular mechanisms of pathogenesis, their regulation and mechanisms of delivery.

- To make the student community aware of the threat of antibiotic resistance and to understand molecular mechanisms of antibiotic resistance.
- To introduce to the student the concept of Microbiome- its significance in health and disease To acquaint the student to emerging/re-emerging diseases in India
- To reinforce the basic concepts in epidemiology and to elaborate on terms and methodologies in infectious diseases
- To emphasize on clinical laboratory practices followed in Bacteriology labs.

Learning Outcomes

Student will be able to correlate molecular mechanisms of virulence expression, regulation and secretion to disease by different pathogens that cause chronic infections, toxin associated,& biofilm mediated infections

Students will be able to correlate post interventional procedures to biofilm associated infections on implants and prosthetic devices.

Students will be able to reason out

- o the threat of antibiotic resistance and can create awareness
- o the importance of microbiome and can be equipped to research on it

Student will be well informed about Emerging and re-emerging diseases in India

Student will be equipped with skills and an understanding about

- o Epidemiological practices
- o Clinical lab practices in bacteriology like QC and AST

Practicals based on VESPSMB104

Study of few virulence mechanisms in pathogens

Study of Quorum Sensing and Quorum sensing inhibitors in C.violaecium

Microbial Biofilm formation on various surfaces

Determination of Minimum Biofilm Inhibition Concentration of an antibiotic

Detection of specific types of Antibiotic Resistance.

- o MRSA
- o VRE

Antibiotic susceptibility testing- Conventional micro broth dilution method according to CLSI guideline.

Checker Board Assay for detecting synergistic activity of two antibiotics

Determination of Quality Assurance of laboratory media, reagents.

Problems on Epidemiology

SEMESTER II DETAIL SYLLABUS

VES PSMB201 (MOLECULAR GENETICS - II)

Learning objectives

The learner will know the role of Chromatin in Regulating Gene Transcription, repression of Gene Activity by Histones

The student will know about Drosophila developmental stages which is the traditional geneticist's and embryologist 's tool.

The learner will also be conversant about Population genetics Hardy-Weinberg Law and related topics.

The student will have theoretical knowledge of important tools and techniques like PCR,

DNase Footprinting, DMS footprinting and other footprinting methods,

The student will gain information about Functional genomics - DNA Microarray technology, as well as Proteomics

Learning Outcomes

At the end of the course th<mark>e s</mark>tudent will be

Well versed in knowing the various techniques required to perform molecular genetics experiments

Have the basic and advanced knowledge about Drosophila Development which are an geneticts tool to study gene organization will be known

Have Information about functional genomics

VESPSMB202

(Research Methodology, Bioinformatics & Biostatistics)

Learning objective

Research in advancement of the subject is essential for the progression of the students at postgraduate level. This course is designed for postgraduate students in microbiology to introduce the importance of research, process of research and analysis of data to draw correct conclusions. The Course includes concept of research, types of research, sampling, data collection, processing of data. Course also enables the candidates the use of statistics in research and explains the concept of scientific writing. This course includes one unit of bioinformatics. This is advancement of the basics science learnt at undergraduate level. Students will not only learn this unit theoretically but also with hands on during practical classes.

Learning outcome

At the end of the course students:

Will be able to understand Fundamentals of research, process of research

Search the literature

Understand the concepts of reliability and validity of ideas

Write a research proposal

Understand concept and use statistics in research

Able to understand process of scientific writing

Use bioinformatic tools in various aspects of research.

			41.1 Biological databases-nucleic acid sequence databases- gene bank/ EMBL/ DDBJ	01L	
			4.1.2 Protein sequence data bases- (UniProtKB), Derived databases(Prosite, BLOCKS, Pfam/Prodom) Structural databases (PDB, NDB) and Enzyme databases	03L	
		4.2	4.2.1 Concept in sequence analysis- Needleman & Wunsch, Smith & Waterman alignment algorithms	01L	
			4.2.2.Scoring Matrix for nucleic acids and protein- MDM.BLOSUM.CSW 4.2.3Alignment: Pair wise BLAST, FASTA	01L	
			4.2.4 Multiple sequence alignment, PRAS, CLUSTAL W	01L 01L	
		4.3	Phylogenetic analysis and Tree construction Basic concepts of phylogenetic analysis, rooted/uprooted trees, approaches for phylogenetic tree construction	02L	
		4.4	Structure predictions for proteins- Basic approaches for protein structure predictions, comparative modelling, fold recognition	02L	
		4.5	Chemo-informatics- Introduction, applications in pharmaceutical industries	01L	
		4.6	Immuno-informatics- Overview, Reverse vaccinology, Rational Vaccine design	01L	

Self Study : Study of 3D structures of enzymes	
/protein	

Practicals based on VESPSMB201

- 1) Literature review on any current research of 30-40 types pages (It can be on the research project topic that the student wishes to do in MSC part2)
- 2) Problem solving in biostatistics
- 3) Practicals Based On Bioinformatics-

Visiting NCBI and EMBL websites & list services available, software tools available and databases maintained

Visiting & exploring various databases mentioned in syllabus

Using BLAST and FASTA for sequence analysis

Fish out homologs for given specific sequences (by teacher) - decide sequence of some relevance to their syllabus and related to some biological problem e.g.

evolution of a specific protein in bacteria, predicting function of unknown protein from a new organism based on its homology)

Six frame translation of given nucleotide sequence

Restriction analysis of given nucleotide sequence

Pair-wise alignment and multiple alignment of a given protein sequences

Formation of phylogenetic tree

VESPSMB203

(Applied Biochemistry)

Learning Objectives

- To open the domains of applied biochemistry.
- To gain an insight in the multifaceted field of enzymology.
- The practically train students to understand the challenges and problems encountered while dealing with bio-molecules like proteins.
- Commercial outcomes are understood through pharmaceutical products and proteomics-an already established field with extensive applications in diverse fields of biological sciences.

Learning Outcomes

At the end of the course students will be able to

- Understand and relate to metabolic and physiological complexities shown by living organisms.
- Appreciate and understand the intricate manner of communications at the cellular and sub cellular level employing bio-molecules.
- Apply the biological processes at molecular level for production and synthesis of bioactive molecules of commercial significance. Learning the unusual bio-molecules and bioactive compounds will open new avenues for research to the young scientists.
- Obtain Knowledge of Proteomics which will give them a new perspective about diagnosis of diseases and make them competent to handle new challenges if they are employed in modern diagnostic laboratories.
- Undertake advanced studies on enzyme kinetics will help them alter conditions favourably to increase industrial productions.

Course Code	Unit	Sub unit	Title VES	No of lectures	Credits
VESPSMB 203			Applied Biochemistry	60L	04
	1		Enzymes: the catalysts of Cells	15 L	01
		1.1	Information from kinetics, specificity of enzymatic action, mechanisms of catalysis	7L	
		1.2	Inhibition and activation of enzymes	2L	
		1.3	Enzyme isolation and purification	6L	
			Self-study : Draw Eadie-Hofstee, Hanes-Woolf plot, Dixon plot and Cornish-Bowden plot and interpret.		

2		Signalling and stress	15L	01
	2.1	Introduction to two-component signalling systems	7L	
·	2.2	Synthesis of virulence factors in response to temperature, pH, nutrient, osmolarity and	4L	
		quorum sensors, chemotaxis, photoresponses, aerotaxis,

VESPSMB204 (Applied Immunology)

Learning Objectives:

One of the most important areas of immunology is Applied Immunology which encompasses the study of Adversarial strategies during various infections, Vaccines, Immunodeficiency disorders, Immune Tolerance, Advances in Allergy and other hypersensitivities, Transplantation and Transfusion Immunology, Tumor Immunology, Autoimmune diseases that are enlisted and properly covered in the syllabus.

This course will help students to build on the advance information regarding the applications of the basic immunology they have studied during their undergraduate course.

Learning Outcomes:

Students should be able to-

Give details of the adversarial strategies during various infections, recent advances in vaccines production and difficulties encountered in it.

Correlate the causes, principles involved, examples, control and treatment of immunodeficiency disorders, hypersensitivity reactions, autoimmune diseases and cancer. Comment on the organs, tissue transplantation and blood transfusion-principle involved, types of transfusion reactions and their control, tests to be performed for safe transplantation.

Course Code	Unit	Sub unit	Title V.C.D.	No of lectures	Credits
VESPSMB 201		unit	Applied Immunology 1962	60L	04
	1		Adversarial strategies during infection	15 L	01
		1.1	1.1.1 Bacterial survival strategies	10	
			 Evading complement, Evading killing by macrophages 1.1.2 The host counter attack against bacteria Toxin neutralization Opsonization of bacteria 1.1.3 The habitat of intracellular bacteria: 		

- Defence against intraceIlular bacteria - Role of activated Macrophages 1.1.4 Viral survival strategies - antigenic variations - non functional T- cell epitopes - interference with antigen processing and/ or presentation - interference with antigen processing and/ or presentation - interference with inmune effector mechanism 1.1.5 Immunity to fungi 1.2 Vacines - purified components as bacterial vaccines - Viral subunit as vaccine - carobolydrate vaccine - actioblydrate vaccine - DNA and RNA vaccines 1.2.3 Current vaccines 1.2.4 Difficulties in the development 1.2.5 Vaccines for protection against bioetrorism 1.2.6 Immunization against cancer 2 Immunodeficiency 1.3.1 Deficiencies of pattern recognition -Receptor signaling 08 2.1.2 Cophagocytic cell defects 1.1.4 Diagnosis and reatment of primary immunodeficiency 2.1.3 Complement system deficiencies 1.1.4 Diagnosis and treatment of primary immunodeficiency 2.1.6 Primary B-cell deficiency 1.1.7 Sovere combined immunodeficiency 2.1.7 Severe combined immunodeficiency 1.1.8 Diagno			Bacterial survival strategies		
Image: Section of a clivated Macrophages 1.1.4 Viral survival strategies 1.1.4 Viral survival strategies - non functional T- cell epitopes - interference with antigen processing and/or presentation - interference with immune effector - mechanism 1.1.5 Immunity to fungi 05 1.2 Vaccines 05 1.2.1.5 Immunity to fungi 05 1.2.1.5 Immunity to fungi 05 1.2.2 Vaccines 05 1.2.3 Vaccines 05 1.2.4 Vaccines 05 1.2.5 Newer approaches to - vaccine development 1.2.4 Difficulties in the development of Parasitic vaccines : - Malaria 1.2.5 Vaccines for protection against bioterrorism 1.2.6 1.2.4 Difficulties in the development 1.2.6 2 Immunodeficiency 15L 01 2.1 2.1.1 Deficiencies of pattern recognition - Receptor signaling 08 1.1.2 2.1.3 Complement system deficiencies 2.1.4 Cytokine and cytokine receptor deficiencies 2.1.4 Cytokine and cytokine - receptor deficiencies 2.1.5 1.5			-		
1.1.4 Viral survival strategies antigenic variations antigenic variations non functional T-cell epitopes interference with antigen processing and' or presentation interference with immune effector mechanism 1.2 Vaccines 05 1.2.1 Subunit vaccines 05 - purified components as bacterial vaccines - vaccines 05 1.2.1 Subunit vaccines - Viral subunit as vaccine carbohydrate vaccine - carbohydrate vaccines 1.2.1 1.2.2 Current vaccines 1.2.4 Difficulties in the development of Parasitic vaccines : -Malaria 1.2.5 Vaccines for protection against bioterrorism 1.2.6 Immunodeficiency 15L 2 Immunodeficiencies 2.1.2 Primary B-cell deficiencies 2.1.3 Complement system deficiencies 2.1.4 Cytokine and cytokine receptor deficiencies 2.1.2 2.1.3 Primary B-cell deficiency 2.1.4 Cytokine and cytokine receptor deficiencies			-		
- non functional T- cell epitopes - interference with antigen processing and/ or presentation - interference with immune effector mechanism - interference with immune effector mechanism 1.1.5 Immunity to fungi 1.2 Vaccines 05 - purified components as bacterial vaccines - Viral subunit as vaccine - carbohydrate vaccine - arbohydrate vaccine - arbohydrate vaccines 1.2.1 Difficulties in the development 1.2.3 Current vaccines 1.2.4 Difficulties in the development of Parasitie vaccines : - Malaria - Malaria 1.2.5 Vaccines concertaines 1.2.6 Immunodeficiency 1.2.7 Vaccines under development 2 Immunodeficiency 1.1.1 Deficiencies of pattern recognition - Receptor signaling 2.1.2 Phagocytic cell defects 2.1.3 Complement system deficiencies 2.1.4 Cytokine and cytokine recognition receptor deficiencies 2.1.5 Primary B-cell deficiency 2.1.6 Primary B-cell deficiencies 2.1.7 Seter study is bagonsis and treatment of primary immunodeficiency					
interference with antigen processing and/ or presentation interference with immune effector mechanism 1.12 Vaccines 05 1.2 1.2 Vaccines - purified components as bacterial vaccines 05 - Viral subunit as vaccine - carbohydrate vaccines - arbohydrate vaccines - varacine development 1.2.1 Newer approaches to vaccine development 1.2.2 Newer approaches to vaccine development of Parasitic vaccines 1.2.4 Difficulties in the development of Parasitic vaccines 1.2.5 Vaccines for protection against bioterrorism 1.2.6 Immunodeficiency 2 Immunodeficiency 2.1.2 Primary B-cell deficits 2.1.3 Complement system deficiencies 2.1.4 Cytokine receptor signaling 2.1.5 Primary B-cell deficiency 2.1.6 Primary T-cell deficiency 2.1.7 Severe combined immunodeficiency 2.1.8 Diagnosis and treatment of primary immunodeficiency 2.1.4 Cytokine and cytokine receptor deficiencies 2.1.5 Primary T-cell deficiencey 2.1.6 Primary T-cell deficiencey			- antigenic variations

3		Advances in Allergy and other hypersensitivities	15L	01
	3.1	3.1.1 Type –I hypersensitivity 3.1.2 Type –II hypersensitivity 3.1.3 Type –III hypersensitivity 3.1.4 Type –IV hypersensitivity 3.1.5Type -V hypersensitivity (Mechanism/principle, examples, diagnosis	07	
		and treatment of these hypersensitive)		
	3.2	 Transplantation and Transfusion Immunology 3.2.1 Types of Graft 3.2.2 Types of graft rejection 3.2.3 Mechanisms of graft rejection 3.2.4 Matching the donor and recipient 3.2.5 Immuno suppression 3.2.6 The foetus as an allograft 3.2.7 Blood transfusion Blood grouping and cross matching Transfusion reactions Criteria for selection and rejection of 	08	
4		Blood Donor Immunological disorders	15L	01
	4.1	Tumor Immunology 4.1.1 Cell- intrinsic and extrinsic mechanisms of tumor suppression 4.1.2 Role of inflammation in the enhancement of tumor initiation, promotion and progression 4.1.3 Tumor antigens and their classes 4.1.4Approaches to cancer immunotherapy - Passive immunotherapy with monoclonal antibodies - Unmasking of the latent T-cell responses - Antigen independent cytokine therapy	07	
	4.2	Autoimmune diseases4.2.1 Causes4.2.2 Mechanisms4.2.3 Pathogenic effects of autoantibody4.2.4 Pathogenic effects of complexes with auto antigens4.2.5T cell mediated hypersensitivity as a Pathogenic factor in autoimmune disease	08	

Self Study Topics	
1. Case studies – Autoimmune diseases	
2. Case studies - Use of Immune	
therapies in cancer, transplantation	
and other immunological disorders	

Practicals based on VESPSMBP204

- 1. Hemoglobin estimation by Cyanmethaemoglobin method using Drabkins Fluid as one of the criteria used for selection of blood donor during collection of blood for safe transfusion.
- 2. Blood grouping and Compatibility testing /cross matching of blood for safe blood transfusion.
- 3. Determination Of Enzymes Of Oxidative Stress (SOD And Catalase)
- 4. NBT Analysis Of Blood Sample
- 5. Serum Lysozyme Activity
- 6. Serum Myeloperoxidase Activity (MPO)
- 7. Rheumatoid factor test for laboratory diagnosis of Rheumatoid arthritis
- 8. Lupus erythematosus (LE) cell preparation-Principle, Procedure and Significance to be explained during the practicals using permanent slides/ color atlas of diagnostic immunology/Microbiology
- 9. RIST and RAST- Principle, Procedure and Significance to be explained during the practicals using power point presentation/ youtube.

Text books:

- 1. Roitt's Essential Immunology 13th Ed. –Wiley Blackwell
- 2. Kuby Immunology 6th Ed W. H. Freeman and Company, New York

Reference Books:

- 1. Immunology Essential and Fundamental Sulbha Pathak, Urmi Palan, 3rd Ed. Capital Publishing Company (New Delhi-Kolkata)
- 2. Kuby Immunology 7th Ed W. H. Freeman and Company, New York
- 3. Kuby Immunology 8th Ed Macmillan education
- 4. Immunology An Introduction 4th Ed Tizard
- 5. Elements of Immunology- Fahim Halim Khan –Pearson Education
- 6. Medical Laboratory Technology Kanai Mukherjee vol. 1

Modality of assessment

A. Theory -Internal assessment 40%

40 marks

Evaluation type	Marks
Assignment that can include article writing, report writing, preparation of a review, on any topic selected from each course paper. The topic selected will besides the content should be assessed by any plagiarism software by the staff (Software to be kept ready by college)	20
Submission of Self study topics / One class Test (multiple choice questions / objective)	10
a. Active participation in routine class instructional deliveries	05
b Overall conduct as a responsible student, wrt manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.	05
